

Solution Requirements Document - Metro Ticket Booking System

Functional Requirements

- Service Catalog ticket booking form for passengers.
- Input fields: Source, Destination, Passenger Type, Number of Tickets.
- Automated fare calculation based on selected route.
- QR code generation for digital tickets.
- Store ticket data in Metro Database (custom table).
- Role-based access control for secure operations.

Non-Functional Requirements

- System should provide fast response time for booking operations.
- Secure handling of user data and transactions.
- Scalable architecture to support multiple users.
- High availability of service portal.
- User-friendly and intuitive interface design.

Business Requirements

- Reduce manual ticketing effort in metro stations.
- Improve commuter convenience through digital booking.
- Enable cashless transactions using digital payment methods.
- Provide real-time travel data analytics.
- Support eco-friendly paperless ticketing system.

System Constraints

- Must operate within ServiceNow platform limitations.
- Dependent on external QR code generation service.
- Requires internet connectivity for transactions.
- Integration with payment gateway required for live operations.
